

Biogas Additives

*The right solution
for every process*

product overview

more methane
—
stable processes
—
better agitatability
—
*faster
degradation*

product overview

symptoms:

possible cause:

recommendation:

low or fluctuation biogas production and quality

trace element deficiency

bioEngine
Nutrimix-L
premium

bad agitability and biogas production, increased pH value

nitrogen surplus

bioEngine
Nitro-Regulators

floating deck, bad agitability and low biogas production

unfermented, fibre-rich substrates

bioEngine
HydroBiool

- slow increase in biogas production after process failure
- low CH₄ content

missing or weak methane microorganisms

bioEngine
Methastab

high H₂S concentrations despite chemical desulphurisation measures

low activity/low count of sulphur transforming microorganisms

bioEngine
S-X

low gas quality, fluctuating gas production, high pH value and bad agitability

simultaneous emergence of several deficiencies

bioEngine
Combi-Supplements
